ECOThink Training Implementation

ECOThink has successfully delivered five training sessions so far, with three taking place in Graz (Austria) and two in Maribor (Slovenia). These sessions brought together (VET) students, professionals and entrepreneurs to strengthen skills in design for sustainability, with a strong practical focus on tools such as OpenLCA and SPI. Through hands-on learning, participants explored how to assess environmental impacts, optimise resource use, extend product life cycles, and support more sustainable decision-making in industry. With these activities, ECOThink is making an important contribution to advancing green skills, fostering innovation, and promoting responsible practices across sectors.

Impressions from the Trainings

What's coming?

Through the implementation of the training sessions, we have gained valuable insights that will help us further improve our learning materials. These refined resources will be published on our Knowledge Hub by the end of the project.

Stay tuned!

Meet the partners

Levilo - Association for Ecological and Social Sustainability

LEVILO develops innovative e-courses for professional education and training in environmental design, product and process development, and sustainability analysis. By integrating life cycle assessment (LCA) into practice-oriented VET training, LEVILO helps learners build the skills needed to create sustainable solutions and environmentally friendly products.
