The ECOThink Knowledge Hub has been published!

The ECOThink Knowledge Hub is a practical online resource for learners and educators, bringing together materials on eco-design and life cycle assessment for vocational education and training. It offers a foundational guide, hands-on worksheets, presentation slides, videos, and an OpenLCA manual to support both teaching and self-paced learning.

The hub is designed to turn sustainability concepts into action with accessible, ready-to-use resources in multiple formats and languages (English, German, Slovenian).

What can I find on the Knowledge Hub?

Foundational Guide

Our ECOThink textbook is the main resource for everyone who wants to teach or learn about Design for Sustainability.

Worksheets

Practical worksheets accompany the textbook, helping learners apply key concepts directly through guided, hands-on activities.

Additional Resources

Short introductory videos, presentation decks for running your own workshop, and an easy-to-use OpenLCA manual.

What's coming?

The ECOThink project is coming to an end, but that does not mean that our materials and activities will not be sustained.

Explore our knowledge hub and follow ACEEU, Levilo and MIITR on social media to stay up to date on future workshop offers and updates on the project materials.

Meet the partners

MIITR - International Institute for the Implementation of Sustainable Development

MIITR is a Slovenia-based organisation with strong expertise in innovative training, stakeholder engagement, and the dissemination of project results. Drawing on its experience with SMEs, public actors, universities, and professional associations, MIITR develops learner-centred approaches that respond to target group needs and support innovation, entrepreneurship, and sustainable regional development.
